

Matthew Rubin

I coded the settings screen (`settingsScreen.dart`) and did some minor changes in `main` (`main_two.dart`) to allow it to be accessible. I committed this work to the `rubin-settings-screen` branch which was later merged by hand into the master branch by another member. I also did most of the font selection file (`fontSelection.dart`). A good portion of the work related to font selection was researching how to let users dynamically choose a font during runtime without needing to rebuild the entire application. This code was committed both to both the `rubin_dynamic_font` and the `martin_backup` branches. I also helped troubleshoot and fix the code for font selection, but didn't commit the changes myself due to an issue with updating my IDE.
